Fashions in Management Research Nov 03 2022 Published in 1999, this text sets out to analyze fashions in management literature through studying patterns in the citations offered to leading management authors. Particular attention is paid to those publications which are cited extensively, but only for a short period - these publications are regarded as potentially subject to fashionable pressures. More detailed case studies of fashionable publications are undertaken to gain a greater understanding of what factors may lead to management fashions. The book represents a large-scale empirical analysis of management fashions and culminates in an empirically validated theory of management fashions.

Firecontrol May 05 2020 The Government's programme to replace 46 local fire and rescue service control rooms with nine purpose-built regional control centres has been inadequately planned, poorly executed, and badly managed. Given the investment of public funds already committed, and the benefits that will accrue, the MPs conclude that the Department for Communities and Local Government (DCLG) should press ahead with the FireControl project so long as Ministers can agree urgently a viable project plan that will see the project go live by a target date of mid-2011 and in which the main stakeholders can have confidence. The excessive cost of abandoning the project - an extra £8 million more than it will cost to complete - indicates the Department should continue with the project so long as it also: examines alternatives and provides assurances that FiReControl represents the best viable option for the future of Fire and Rescue Services; resolves its contractual dispute with EADS and implements a viable project plan; addresses the shortcomings in its management of the project; consults fully with FRS staff and professionals to define end-user requirements; provides assurances that the safety and security of the Olympic Games will not be compromised by the roll-out of new Regional Control Centres. DCLG should urgently to draw up and consult on contingency plans for any further failures in the FiReControl programme to ensure ongoing safe and effective fire and rescue services cover across the whole country.

Handbook Of Forensic Genetics: Biodiversity And Heredity In Civil And Criminal Investigation Sep 28 2019 The use of genetics for the resolution of legal conflicts has recently been gaining a higher profile, largely as a result of scientific and technological advancements and the substantial broadening of applications. The theoretical framework underlying forensic genetics is the same irrespective of the materials and technology involved, however a great divide still exists in the manner and processes related to human and non-human analyses. This advanced handbook intends to overcome the historical barriers between the scientific fields of legal medicine, biodiversity and conservation, and food analysis by presenting a unifying, global perspective on the implications of genetic analyses on forensic affairs. This global perspective is presented in three parts: modes of inheritance and reproduction and taxonomic implications; current technological approaches and future perspectives; and a comprehensive systematization of the types of applications and organisms. Finally, a critical revision of the current investigative/expert systems and future perspectives is undertaken. This book provides a collection of international research, thereby constituting a reference platform for the forensic community and an advanced textbook for graduate students. It encompasses the theoretical bases of the field, and presents in the context of both perspectives of forensic action — probative and investigative — a comprehensive coverage of the current applications and technological state of the art.
